

**In the Claims:**

1. (Currently amended) A method for scenario synchronizing between a primary display and a secondary display of a communication device, comprising:

providing a music application, wherein the music application provides a first level of information and functionality to the primary display, wherein the first level of information includes a highlighted selected song title and additional song titles of a play list, wherein the music application provides a second level of information and functionality to the secondary display, wherein the second level of information includes the selected song title of the play list,

upon accessing the secondary display, the music application causes the display of the selected song title of a music list on the secondary display according to the second level of information; and

upon accessing the primary display, the music application causes automatic retrieval of the first level of information, wherein the music application causes the selected song title of the music list that was selected on the secondary display to be displayed in the primary display according to the first level of information.

~~receiving an event associated with a music application at the communication device;~~  
~~displaying a selected song title associated with the event on the secondary display;~~  
~~initiating a task associated with the music application from the secondary display;~~  
~~accessing the primary display;~~  
~~retrieving additional song titles associated with the event from the music application; and~~  
~~in response to accessing the primary display, automatically displaying on the primary display the initiated task associated with the music application and displaying on the primary display the additional song titles associated with the initiated task.~~

2. (Original) The method of Claim 1, wherein the communication device is a clamshell flip-style device.

3. (Original) The method of Claim 2, further comprising opening the communication device such that the primary display is accessible.

4. (Canceled)

5. (Previously presented) The method of Claim 1, further comprising dismissing the selected song title associated with the event from the secondary display.

6-7 (Canceled)

8. (Currently amended) A system for scenario synchronizing in a communication device, comprising:

a secondary display;

a primary display coupled to the secondary display; and

a music application that activates upon the occurrence of a user-initiated event at the communication device, wherein:

the music application provides a first level of information and functionality to the primary display, wherein the first level of information includes a highlighted selected song title and additional song titles of a play list,

the music application provides a second level of information and functionality to the secondary display, wherein the second level of information includes the selected song title of the play list,

upon accessing the secondary display, the music application causes the display of the selected song title of a music list on the secondary display according to the second level of information; and

upon accessing the primary display, the music application causes automatic retrieval of the first level of information, wherein the music application causes the selected song title of the music list that was selected on the secondary display to be displayed in the primary display according to the first level of information, wherein assessing the primary display causes the music application to highlight the selected song in the primary display.

~~the first level of information and functionality is greater than the second level of information and functionality;~~

~~the second level of information and functionality associated with the user-initiated event is retrieved from the music application and displayed on the secondary display, and~~

~~upon accessing the primary display, the first level of information and functionality associated with the user-initiated event is retrieved from the music application and displayed on the primary display, wherein navigation of the music application is not required for access to the first level of information and functionality.~~

9. (Original) The system of Claim 8, wherein the primary display is larger than the secondary display.

10. (Original) The system of Claim 8, wherein the secondary display is located on an outer surface of the communication device.

11. (Original) The system of Claim 8, wherein the communication device is a clamshell flip-style device.

12. (Original) The system of Claim 11, wherein the primary display is accessible when the communication device is opened.

13. (Canceled)

14. (Original) The system of Claim 8, further comprising a first set of hardware coupled to the secondary display for manipulating content shown on the secondary display.

15. (Original) The system of Claim 8, further comprising a second set of hardware coupled to the primary display for manipulating content shown on the primary display.

16. (Currently amended) A computer-readable storage medium on which is stored a computer program for scenario synchronizing between a primary display and a secondary display of a communication device, the computer program comprising instructions, which when executed by a computer, perform:

displaying a selected song title of a music list on the secondary display, wherein the selected song title of the music list is navigatable from the secondary display, wherein the selected song title of the music list is associated with a music application;

accessing the primary display;

automatically retrieving additional song titles of the music list ~~associated with~~ from the music application; and

in response to accessing the primary display, automatically displaying, on the primary display, the selected song title that was selected on the secondary display and the additional song titles of the music list ~~associated with~~ from the music application, wherein accessing the primary display causes the music application to cause the display of the selected song title that was selected on the secondary display and to cause the selected song title to be highlighted on the primary display; and wherein the selected song title is highlighted in the music list.

in response to accessing the secondary display after the primary display has been accessed, causing the music application to cause the secondary display to automatically display the selected song title that is highlighted on the primary display.

17-18 (Canceled)

19. (Currently amended) The computer-readable storage medium of Claim 16, wherein the communication device is a clamshell flip-style device.

20. (Canceled)
